Test Case 1
Summary: Script can add two numbers supplied as arguments.

Procedure: Run script with at least two arguments. First two arguments must be integers.

Expected Result: The sum of the first two arguments will be displayed by the console.

Test Case 2
Summary: Script requires at least two arguments.

Procedure: Run script with one argument. Argument must be an integer.

Expected Result: Script will fail, because args[1] is not present.

Test Case 3
Summary: Script requires first two arguments to be integers

Procedure: Run script with two arguments. First argument must be an integer, and second must not be an integer.

Expected Result: Script will fail because args[1] cannot be parsed into an integer.
